

NALUKA

Compliance + Escrow OS for African Aviation

THE BROKER PLATFORM

How Aeropreserve scales his Rolodex without losing his moat

THE BROKER PROBLEM

You built the trust. The platform shouldn't replace you — it should scale you.

Manual quoting

Every RFQ becomes a chain of WhatsApps + emails. Quotes get lost. Suppliers respond at random hours. Days get burned on one part.

No audit trail

You remember the markup. The buyer remembers the price. The supplier remembers their cost. When SACAA asks, nobody can prove who paid what to whom.

Trust at scale = risk

The more buyers and suppliers you introduce to each other in WhatsApp, the more easily they cut you out. Your network becomes their network.

THE SOLUTION

A platform where the broker is the only one who sees both sides.

Software does the matching

Buyer posts what they need. Trigger auto-matches against your supplier inventory in milliseconds.

You set the margin

Per item, per quote, per buyer. Slider from 20% to 200%. The platform never forces a number on you.

Confidentiality is structural

Buyers cannot see supplier names. Suppliers cannot see buyer names. Enforced at the database level, not just hidden in the UI.

THE CONFIDENTIALITY MODEL

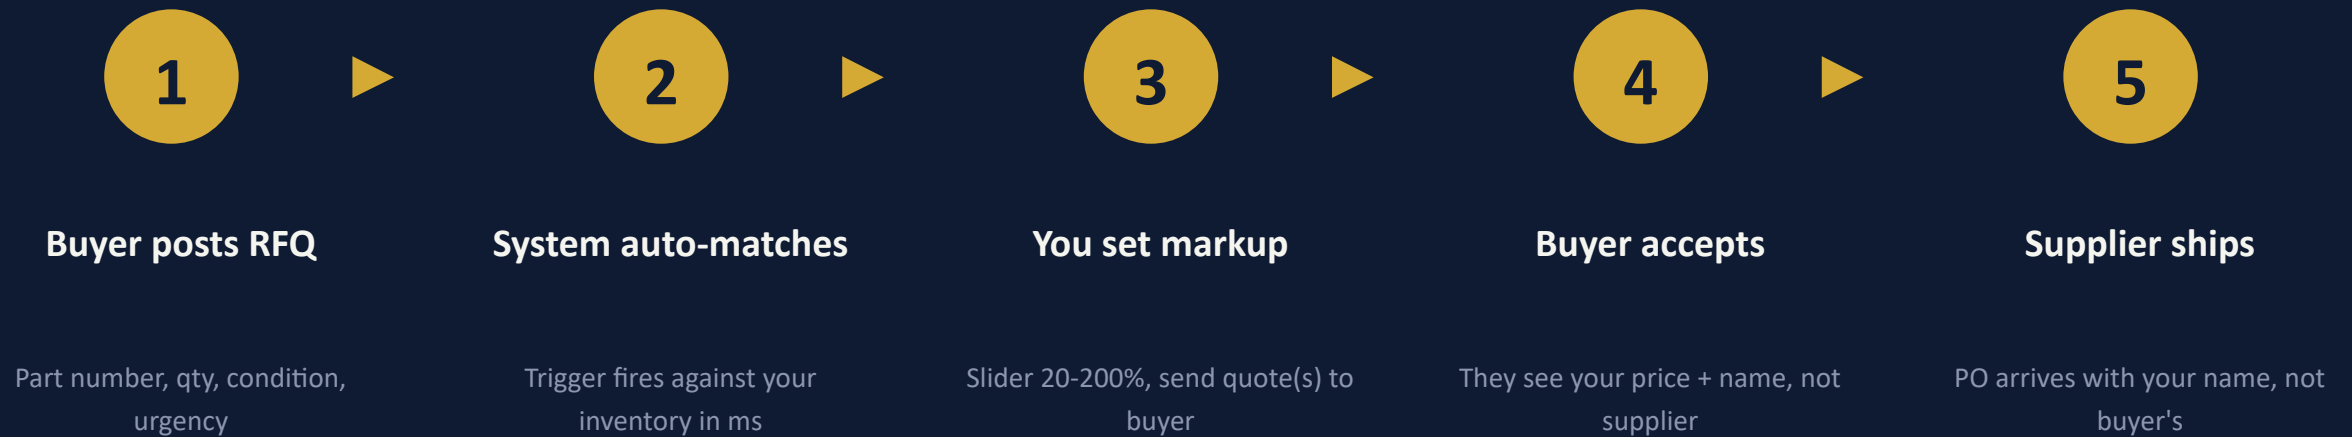

Three users. Three different views of the same transaction.

	BUYER	BROKER	SUPPLIER
Sees buyer identity?	self only	✓ ALL	✗ never
Sees supplier identity?	✗ never	✓ ALL	self only
Sees supplier base price?	✗ never	✓	✓ their own
Sees retail price buyer pays?	✓ broker's quote	✓	✗ never

Enforced at the database level via Row-Level Security. Not just hidden in the UI.

THE DEAL FLOW

From RFQ to delivery in five steps.

Naluka holds the buyer's funds in escrow until delivery is confirmed. You're paid your cut automatically when the deal closes.

FOR BUYERS

One trusted broker. Multiple quotes. Faster turnaround.

Stop chasing

Post once. Receive quotes from your broker without the WhatsApp back-and-forth.

Compare offers

If your broker quotes multiple matches, see them side by side. Pick the best one.

Audit-ready records

Every quote, acceptance, and delivery is timestamped and exportable for your SACAA audit pack.

No hidden games

You see the broker's markup % on every quote. No surprises. No "what was the real price?"

FOR SUPPLIERS

List once. Your inventory works for you while you sleep.

Set your price, keep your margin

You list your net. The broker handles markup. What you list is what you get.

No buyer relationship management

No phone calls from a hundred different operators. The broker is your single counterparty.

Escrowed payments

Naluka holds the buyer's funds. You get paid when delivery is confirmed. No invoicing chase.

API or manual

Bulk-upload your inventory, or grant API read access. Either way, your stock is live to brokers globally.

FOR THE BROKER

Your Rolodex. Your margins. Your control. At software scale.

Auto-matched RFQs

Trigger finds inventory matches the moment a buyer posts. No more manual cross-referencing.

Per-item markup control

Slider per match, 20-200%. You know each supplier's volume; only you know what the buyer will accept.

Money UI lights up

See total markup captured, your 50% cut, what's pending, what's owed. Real-time as deals close.

Step out gradually

Whatever you used to do in WhatsApp, the platform now does. You stay in the loop only when you want to.

THE ECONOMICS

Worked example: one part, three parties paid.

Naluka platform fee = ZAR 5,000 (the other 50% of markup)

SECURITY & TRUST

Aviation-grade. Built for the SACAA audit, not for the demo video.

Row-Level Security

Every database query is filtered at the row level by who you are. The confidentiality model is not "we promise not to look" — it's "we cannot look without a code change."

Hash-chained audit ledger

Every regulated event (RTS signed, funds released, dispute opened, KYC approved) is appended to a tamper-evident SHA-256 chain. Verify any segment in one click.

Escrow custody

Buyer funds sit with Naluka, not the broker. Even if a broker goes dark, buyers are protected; even if a buyer disputes, suppliers know their payout is preserved pending arbitration.

POPI + KYC

Full POPI Act compliance for SA data subjects. KYC includes SACAA licence checks and ICAO state-of-licence verification for foreign nationals.

ROADMAP

Shipping now → next quarter → 6 months out.

LIVE TODAY

- Buyer RFQ + broker matching + supplier PO
- Per-item markup slider (20-200%)
- Auto-match trigger on RFQ
- Referral attribution + dashboard
- Confidentiality boundaries (DB-enforced)
- KYC + audit ledger

NEXT QUARTER

- PayFast integrated escrow
- Multi-currency (USD, GBP, EUR)
- In-app + email notifications
- AOG fast-path (WhatsApp ping)
- Supplier API onboarding
- Custom domain naluka.aero

SIX MONTHS

- Competitive multi-broker bidding
- Logistics + customs integration
- Aircraft fleet management
- Team accounts (multi-user ops)
- Pan-African expansion (Kenya, Nigeria)
- Mobile app (iOS + Android)

Stop chasing WhatsApps. **Start closing deals.**
